PERS LETE 135:283-286(1944)

THEN THE PROPERTION WITH OWNER CHAPBENNES, HSP70S STABILIZE PRENKTION. IN COOPERATION WITH COWNER CHAPBENNES, HSP70S STABILIZE PRENKTISTENT PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING OF MEMILY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN ORGANELLES. THE HSP70S IN MITCHONOMORIA AND THE EMPORLASMIC RETICULUM PLAY AN ADDITIONAL ROLE BY PROVIDING A DRIVING FORCE FOR PROTEIN TRANSLOCATION. THEY ARE INVOLVED IN SIGNAL TRANSDUCTION PATHWAYS IN COOPERATION WITH HSP90. THEY PARTICIPATE IN ALL THESE PROCESSES THROUGH THERE ABLITY TO RECOGNIZE NUMBER IN ALL THESE PROCESSES THROUGH THERE ABLITY TO RECOGNIZE NUMBER UNDERTONE SECRETS WITH A NET HYDROPHOET CHARATERE EXPOSED BY POLYPEPTIDES DURING TRANSLATION, AND MEMBRANE TRANSLOCATION, OR POLLOWING

STRESS-INDUCED DAMAGE.

AND MEMBRANE TRANSLOCATION, OR FOLLOWING STRESS-INDUCED DAMAGE. SIMILARITY: BELONGS TO THE HEAT SHOCK PROTEIN 70 FAMILY.

a collaboration

OTHER PROTEINS. THEY BIND EXTENDED PEPTIDE SEGMENTS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION

e 146:273-278 (1994).

FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE PREEXISTENT PROTEINS AGAINST AGGRECATION AND MEDIATE THE FOLDING OF NEMLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS MITHIN ORGANELLES. THESE CHAPERONES PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECOGNIZE MONNATIVE CONFORMATIONS OF

ESSTATISTE PROTEIN AGAINST AGGREGATION AND HEDDING THE FOLDING OR HERIX TRANSLATED POLYMEPTIDES IN THE CYPOSOL AS EALL AS WITHIN ORGANIZILES. THESE CHAPENORES PARTICIPATE IN ACTIONATION OF OTHER FOOTEINS. THEY BLOD EXTRADED POPTIDE SECHENTS WITH A NET OTHER EXPOSED BY POLYMETTIDES DEADNING TRANSLATION ON THE HEAD OF THE SECOND POPTIDE SECHENTS WITH A NET OTHER EXPOSED BY POLYMETTIDES DURING TRANSLATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        HS72_RAT

No. is the number of results predicted by chance to have
score greater than or equal to the score of the result being pu
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB seq

The presence and quantities of these proteins can be detected using 2D gel electrophoresis comparison of cell lysates. The proteins can be used as biochemical markers to detect the phase of the endometrium and can be measured in body fluids, obviating the need for endometrium and can be measured in body fluids, obviating the need for endometrial blogsies.

The present invention describes a fused protein (T) prepared from a peptide containing a CTL (cytotoxic T lymphoxyte) epitope recognised by cytotoxic T cells and a protein containing the Affress dominate shock protein. Also described are: (1) a drug composition containing (T) as artire ingredient; (2) a DNA encoding (T); (3) an expression vector containing the DNA of (2); and (4) a transformant which can retain the protein vector of (3); (1) has cytostatic, immunostimilant and protein containing the DNA of (2); and (4) a transformant which can retain the protein sector of (3); (1) has cytostatic, immunostimilant and protein compositions in preventing and/or treating interctions diseases such as majaria or cancer e.g. to provide systemic immunity against leakaemia. The present sequence represents a specifically claimed heat shock protein for use in a fused protein of the present invention. Fused protein capable of inducing cellular immune response, useful as active ingredient for drug compositions in preventing and/or treating infectious diseases such as malaria or cancer Claim Page 46-48; 72pp; Japanese

The invention relates to complexes of peptide-binding fragments of HSPs with antiqueic molecules and their use in immunotherapy for the treatment of infectious diseases and cancer. Claimed methods of treating or preventing cancer/infectious diseases involve culturing a cancer cell/infected cell transformed with a nucleic acid encoding a HSP peptide-binding domain, recovering complexes of the HSP fragments noncovalently associated with peptides from the cancer cell/infected complexes. These methods can cell, and administering the recovered complexes. These methods can
                                                                                                                                                                                                                                                                                                                                                                                                                                    Pharmaceutical composition, used to treat or prevent infection or gracer, comprises a complex comprising a heat shock protein-binding fragment associated with a molecule displaying antigenicity of an
                                                                                                                                                                                                                                                                                                                                                                                                       Claim 46; Fig 1C; 106pp; English.

Identifying compounds that inhibit proliferation of cells and capable of modulating the expression of heat shock protein 72 gene and/or activity of Hsp72 useful for treating cancers such as leukemia,

77pp; English

The invention relates to a novel method of identifying compounds that inhibit proliferation of cells comprising contacting a test compound with a cell which overexpresses HBP72 (heat shock protein 72), and determining if the test compound inhibits activity or expression of HBP72 contacted with the test compound under optimum

                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a fused protein (1) prepared from a peptide containing a CUL (cytotock T lymphocyte) epitope recognised by peptide containing a the cytotock T lymphocyte) epitope recognised by cytotock T cells and a protein containing the Aprase domain of a heat shock protein. Also described are: (1) a drug composition containing the as active ingredient; (2) a DNA encoding (1); (3) an expression vector containing the DNA of (2); and (4) a transformant which can retain the protein plant of (2); (1) has cytostatic, immunositiniant and protein rective and can be used as a cellular immune response inducer. The protein is useful as an active ingredient for during some compositions in preventing and/or treating infortious diseases such as malaria or cancer e.g. to provide systemic immunity against seukaemia. The present sequence represents a specifically claimed heat shock protein for use in a fused protein of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Fused protein capable of inducing cellular immune response, useful active ingredient for drug compositions in preventing and/or treat infectious diseases such as malaria or cancer

                                                                             This sequence represents the human heat shock protein SHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21,3-6 and 14922-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of Stress and response and diagnosis of stress diseases including the stress and response and diagnosis of stress diseases including
                                                                                                                                                                                                                                                                                                                                                                                  Abnormal transcription of intracellular HSP70mRNA under acute and chronic continuous load of stress in a human being and its application
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents the human heat shock protein SHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6921.3-2: and 14922-24. The invention relates to the abnormal transcription of introcellular HSP70mRM under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumantisms, schizophrenia, depression and nephrotic syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Abnormal transcription of intracellular {\tt HSP70mRNA} under acute and chronic continuous load of stress in a human being and its application

Human heat shock proteins are located on chromosomes 6621.3-22 and 14922-24. The invention relates to the abnormal transcription of
Heat shock protein 70; Hsp70; NF-kappaB; transplant rejection;
                                                            AAB09886;
                                                                              AAB09886 standard; protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            intracellular HSF70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim

                                                                                                                                                                                                                                                             SG
```

The present sequence is the C-terminal 244 amino acids of the 70kD heat shock protein (Hsp70). This sequence was used in a fusion protein with the p50 subunit of transcription factor MR-Kappan, the sequence of which is indicated in the specification as being SEQ ID No: 1, but which is not given. This fusion protein was created in order to determine the cability of the Hsp70 sequence to direct other proteins into the cell. It was shown that Hsp70 fragments are able to direct other proteins into the cell, a feature which can be used in the treatment of transplant crejection, autoimmune diseases such as rheumatoid arthritis, multiple csclerosis, diabetes, asthma, inflammatory breads portasis, carves' disease and vitelyo, inflammatory disease, poortasis, or stepartials, pancrestitis and adult respiratory disease, syndrome, cancer, vascular diseases (wich as restemosis and atherosclerosis) and DNA and RNA viral replication diseases (including herpes).

nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 4/4 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic bith predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or progned discovery and for the problem. They are useful for gene discovery and for the problem of the problem of the problem.

New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes

human

The invention relates to a spatially-addressable set of single

                                         measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present semmence is a samples derived from human fetal liver. The present semmence is
fetal liver. The present sequence is a peptide encoded nucleic acid probe of the invention.

Note: The sequence data for this patent did not form paprinted specification, but was obtained in electronic if

                                   probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting disposing grading, staging monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease.
 hypertension, cardiac arrhythmias and congenital heart disease, Note: The sequence data for this patent did not form part of the specification, but was obtained in electronic format directly is
                                                                                                  The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such

No. is the number of results predicted by chance to have
score greater than or equal to the score of the result being
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Proteins ANNS4349-NS4364 are examples of proteins produced in the endometrium during the hyperplasia, adenovarcinoma or proliferative phase of the endometrium. The presence and quantities of these proteins can be detected using 2D gel electrophores is comparison of cell lysates. The proteins can be used as biochemical markers to detect the phase of the endometrium and can be measured in body fluids, obviating the need

Fused protein capable of inducing cellular immune response, useful as active ingredient for drug compositions in preventing and/or treating infectious diseases such as malaria or cancer

Claim Page 46-48; 72pp; Japanese

δ

문 Š 밁 Š

The present invention describes a fused protein (I) prepared from a peptide containing a CTL (cytotoxic T lymphocyte) epitope recognissed by cytotoxic T calls and a protein containing the ATPase domain of a heat shock protein. Also described are: (1) a drug composition containing the shock protein. Also described are: (1) a drug composition expression vector as active ingression vector (2) a DNA encoding (1); (3) an expression vector containing the DNA of (2); and (4) a transformant which can retain the exercise workers of (2); and (4) a transformant which can retain the expression vector of (3). (1) has cytostatic, immunostimular and protozoacide activities, and can be used as a cellular immune response inducer. The protein is useful as an active ingredient for drug compositions in preventing and/or treating infectious diseases such as malaria or cancer e.g. to provide systemic immunity against Leukaemia. The present sequence represents a specifically claimed heat shock protein for use in a fused protein of the present invention. (I) ψ

The invention relates to pharmaceutical compositions comprising peptide binding fragments of heat shock proteins (RESe) and non-covalient complexes of HSP peptide-binding fragments (HEPE) in non-covalient association with antigenic molecules. Vectories comprising peptide fragments of the invention may be used to stimulate an immune response, in particular cytotoxic T cell responses against cells infected with viruses (including hepatitis type A, B and C, influenza, varicella, adenovirus, herpes simplex (HSV) type I and type II, indeepes tin thodorpest ribnovirus, echovirus, respiratory
                                                                                                                                                                                                                                                                                                                                                                                Vaccine compositions for vaccinating against cancers and infections, comprises peptide-binding fragments (PBFs) of heat shock proteins (HSFs) and non-covalent complexes of PBFs of HSFs and antigente
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Heat shock protein; HSP; HSP peptide-binding fragment; HPBF; vaccine; cytotoxic T cell response; hepatitis virus; herpes simplex virus; human immunodeficiency virus; bacteria; Mycobacteria; Rickettsla; protozoa; Leishmani; Trypanosoma; intracellular parasite; Chlamydia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2001-656559/75
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US2001034042-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Domain

The livertion relates to complexes of peptide-binding fragments of HSPs with antigenic molecules and their use in immunotherapy for the treatment of infectious diseases and cancer. Claimed methods of treating or preventing cancer/infectious diseases involve culturing a cancer cell/infected cell transformed with a nucleic acid encoding a HSP peptide binding domain, recovering complexes of the HSP fragments encovalently associated with peptides from the cancer cell/infected cell, and administering the recovered complexes. These methods can cell, and administering the recovered complexes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pharmaceutical composition, used to treat or prevent infection or cancer, comprises a complex comprising a heat shock protein-binding fragment associated with a molecule displaying antigenicity of an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 46; Fig 1C; 106pp; English.

В ρy 밁

The present invention describes a fused protein (I) prepared from a peptide containing a CTR (cytotoxic T lymphocyte) epitope recognised by peptide containing a CTR (cytotoxic T lymphocyte) epitope recognised by cytotoxic T cells and a protein containing the APTR set domain of a heat shock protein. Also described are: (1) a drug composition containing (I) as a crive ingredient; (2) a DNA encoding (I); (3) an expression vector containing the DNA of (2); and (4) a transformant which can retain the expression vector of (3); (1) is a cytostatic, immunostimulant and

The protein is useful as an active ingredient for drug compositions in preventing and/or treating infectious diseases such as malaria or cancer e.g. to provide systemic immunity against leukaemia. The present sequence represents a specifically claimed heat shock protein for use in a fused protein of the present invention.

Human heat shock proteins are located on ohromasomes 69213-7 and 14921-274. The invention relates to the abnormal transcription of introcellular HSP70mRMA under acute and chronic stress load in a human The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress discasses including theumatisms schizophrenia, depression and nephrotic syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         301
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sapiens
                                                                                                                                                                                                                                                                                                                                                        CODON
```

```
According to the Legend of Fig 2, the H. saplens HSP sequence has 641 amino acid residues, the sequence itself has only 640, including 'O' (') at position 640.

Fig. 2 provides an alignment of heat shock proteins from a variety of organisms: 1. M.hyopneumoniae (Mhyhsp70 - AAR03922);
2. Bacilius megaterium (Emehsp70 - AAR03923);
3. C. coli. (inaK. _AAR03943);
4. C. coli. (inaK. _AAR03943);
5. C. coli. (inaK. _AAR03943);
6. coli. (inaK. _AAR03943);
